

BUSINESS DEVELOPMENT OUTREACH & MEETING PLAYBOOK

Enterprise Software Engineering & Technology Delivery

Document Reference: DL-BD-001

Version: 1.0

Date: 11/09/2026

Classification: Internal Confidential

Owner: Managing Director / Business Development

INTERNAL USE ONLY. Use the relevant script for each situation and personalise it using verified client context. The complete playbook must not be sent to clients.

1. PURPOSE

This playbook defines the standard approach used by DISTILLOGIC TECHNOLOGIES when approaching potential enterprise clients, system integrators, consultancies and technology partners.

The objective is not simply to introduce the company.

The objective is to identify

- real delivery requirements
- active or upcoming projects
- engineering-capacity gaps
- work packages that can be outsourced
- specialist technical requirements
- vendor or subcontracting opportunities

framework partnership opportunities.

DISTILLOGIC should position itself as a

Software Engineering & Technology Delivery Partner

and not primarily as a recruitment agency or low-cost staffing provider.

2. CORE POSITIONING

DISTILLOGIC supports organisations that require additional software-engineering and technology-delivery capability.

Typical engagements may include

- complete projects
- defined work packages
- software modules
- systems integration
- application modernisation
- cloud and platform engineering
- data and AI engineering
- quality engineering
- dedicated engineering teams
- application management

specialist technical capacity.

The objective of initial outreach is to open a relevant business conversation rather than immediately sell individual developers.

3. PRIMARY TARGET CONTACTS

Priority should normally be given to decision-makers involved in delivery and technology.

High-Priority Contacts

Delivery Director

Programme Director

Head of Software Engineering

Head of Application Development

Head of Technology

Engineering Director

Head of Application Services

Head of Delivery

CTO

CIO

Digital Transformation Director

Platform Engineering Director

Data / AI Director

Head of QA / Quality Engineering

Vendor Manager

Strategic Sourcing Manager

Procurement Manager responsible for Technology

Partner / Managing Director within technology consultancies

4. SECONDARY CONTACTS

Useful contacts may include

Project Managers

Technical Leads

Solution Architects

Business Unit Directors

Account Directors

Programme Managers

Resource Managers

Supplier Managers

These contacts may not control final procurement but can provide access to the right decision-maker.

5. HR IS NOT THE PRIMARY ENTRY POINT

Human Resources should not normally be the first contact for project-delivery opportunities.

DISTILLOGIC is primarily seeking

- projects
- delivery scopes
- engineering work packages

technology partnerships.

The preferred discussion is therefore with

Delivery → Engineering → Technology → Procurement

rather than

HR → Recruitment

6. STANDARD DISTILLOGIC INTRODUCTION

The basic verbal positioning statement is

“DISTILLOGIC TECHNOLOGIES is a software engineering and technology delivery company based in Greece. We support enterprises, system integrators and technology organisations with complete projects, defined work packages, engineering teams and specialist technical capacity across software, cloud, integration, data, AI and quality engineering.”

Shorter version

“DISTILLOGIC is an engineering and technology delivery partner supporting organisations with software projects, work packages and specialist engineering capability.”

7. 15-SECOND INTRODUCTION

When very little time is available

"DISTILLOGIC TECHNOLOGIES provides software engineering and technology delivery capability to enterprises and technology partners. We can take responsibility for complete scopes, work packages or dedicated engineering teams depending on the requirement."

8. 30-SECOND INTRODUCTION

"DISTILLOGIC TECHNOLOGIES is a software engineering and technology delivery company based in Patras, Greece. We support organisations that need additional delivery capability across software development, systems integration, application modernisation, cloud, data, AI and QA. We can engage through complete projects, defined work packages or dedicated engineering teams, depending on how the client prefers to structure delivery."

9. PRIMARY COLD EMAIL - DELIVERY DIRECTOR

Subject

Software Engineering Delivery Partnership

Message

- Hello [NAME]

I am reaching out from DISTILLOGIC TECHNOLOGIES, a software engineering and technology delivery company based in Greece.

We support enterprises, system integrators and technology organisations with additional delivery capability across software engineering, systems integration, application modernisation, cloud, data, AI and quality engineering.

Our engagement model can range from defined work packages and application modules to dedicated cross-functional engineering teams.

I would be interested in understanding whether [COMPANY] currently has, or expects to have, software-delivery requirements where an additional engineering partner could support your internal teams.

I would be pleased to arrange a short introductory discussion.

- Best regards

Spiros Melas

Managing Director

distillogic.gr

10. SHORTER COLD EMAIL

Subject

Engineering Delivery Capacity

- Hello [NAME]

I am Spiros Melas, Managing Director of DISTILLOGIC TECHNOLOGIES.

We provide software engineering and technology delivery capability for organisations requiring support with projects, work packages or dedicated engineering teams.

Our capabilities cover software engineering, integration, cloud, data, AI, QA and application management.

I would be interested in discussing whether there are current or upcoming delivery requirements within [COMPANY] where an additional engineering partner could be useful.

- Best regards

Spiros Melas

11. SYSTEM INTEGRATOR / CONSULTANCY EMAIL

Subject

Software Engineering Delivery Partnership

- Hello [NAME]

I am contacting you on behalf of DISTILLOGIC TECHNOLOGIES.

We are interested in establishing delivery partnerships with system integrators and consultancies requiring additional engineering capacity for client programmes, defined work packages or technology projects.

DISTILLOGIC can support delivery across

- software engineering
- systems integration
- application modernisation
- cloud and DevOps
- data and AI

quality engineering.

We can operate as a delivery partner under the prime contractor's governance and client requirements.

I would be interested in discussing whether [COMPANY] works with external engineering partners for current or upcoming programmes.

- Best regards

Spiros Melas

Managing Director

12. PROCUREMENT / VENDOR MANAGEMENT EMAIL

Subject

Technology Supplier / Delivery Partner Introduction

- Hello [NAME]

I represent DISTILLOGIC TECHNOLOGIES, a Greece-based software engineering and technology delivery company.

We are interested in understanding [COMPANY]'s process for onboarding technology delivery partners and software-engineering suppliers.

Our services include software engineering, systems integration, application modernisation, cloud, data, AI, QA and application-management capabilities.

Could you please advise whether there is an active supplier-registration or qualification process for technology service providers?

We can provide the relevant corporate, commercial, security and compliance documentation required for vendor assessment.

- Best regards

Spiros Melas

Managing Director

13. CTO / ENGINEERING DIRECTOR EMAIL

Subject

Additional Software Engineering Delivery Capability

- Hello [NAME]

I am reaching out from DISTILLOGIC TECHNOLOGIES.

We work with organisations requiring additional engineering capability for software development, integration, modernisation, cloud, data and AI initiatives.

Rather than operating only at individual-resource level, we can support defined technical scopes, modules and cross-functional delivery teams.

I would be interested in understanding whether there are areas within [COMPANY]'s current technology roadmap where additional delivery capacity could be valuable.

A short discussion would allow us to determine quickly whether there is a relevant fit.

- Best regards

Spiros Melas

14. LINKEDIN CONNECTION REQUEST

- Hello [NAME]

I lead DISTILLOGIC TECHNOLOGIES, a software engineering and technology delivery company. We work with organisations requiring additional project and engineering-delivery capability.

I would be glad to connect.

Spiros

15. LINKEDIN MESSAGE AFTER CONNECTION

- Hello [NAME]

Thank you for connecting.

DISTILLOGIC supports enterprises and technology partners with software engineering, integration, cloud, data, AI and QA delivery.

We are particularly interested in defined work packages, project delivery and dedicated engineering-team requirements.

I would be interested to understand whether this type of external delivery capability is relevant to any current or upcoming initiatives at [COMPANY].

- Best

Spiros

16. VERY SHORT LINKEDIN MESSAGE

- Hello [NAME]

DISTILLOGIC provides software-engineering delivery capability for enterprise projects and technology partners.

Do you currently work with external engineering partners for project delivery or additional technical capacity?

- Best

Spiros

17. FOLLOW-UP 1 - NO RESPONSE

Send approximately 4-6 business days after initial contact.

Subject

Re: Software Engineering Delivery Partnership

- Hello [NAME]

I am following up briefly on my previous message.

DISTILLOGIC is currently developing delivery relationships with organisations requiring additional software-engineering capability for projects, defined work packages or dedicated teams.

I would be interested to understand whether this is relevant to any current or upcoming requirements within [COMPANY].

- Best regards

Spiros Melas

18. FOLLOW-UP 2 - NO RESPONSE

Send approximately 7-10 business days after Follow-Up 1.

- Hello [NAME]

One final follow-up from my side.

If software-engineering delivery support is handled by another colleague within [COMPANY], I would appreciate it if you could direct me to the appropriate person.

We are primarily interested in project delivery, defined engineering scopes and technology-partner opportunities.

- Best regards

Spiros Melas

19. FINAL FOLLOW-UP

- Hello [NAME]

I appreciate you may not currently have a requirement.

I will close the loop for now.

Should additional software-engineering or technology-delivery capacity become relevant in the future, I would be glad to discuss how DISTILLOGIC could support the requirement.

- Best regards

Spiros Melas

20. RESPONSE WHEN THEY SAY “SEND INFORMATION”

- Hello [NAME]

Thank you.

I have attached our

- Corporate Presentation

Capability Statement.

These provide an overview of DISTILLOGIC's engineering capabilities, delivery models and technology coverage.

Once I understand the specific requirement, I can provide a more focused proposal and relevant engineering profiles.

- Best regards

Spiros Melas

Managing Director

21. RESPONSE WHEN THEY ASK FOR RATES

Do not immediately send the entire Rate Card without understanding the requirement where avoidable.

Suggested response

- Hello [NAME]

Certainly.

We maintain an indicative commercial Rate Card covering the principal engineering disciplines.

Final pricing depends on factors including

- role and seniority
- technical requirements
- engagement duration
- team size
- delivery model
- location

contractual and payment terms.

If you send me the required roles, expected duration and delivery model, I can provide the most relevant commercial range immediately.

- Best regards

Spiros

22. RESPONSE WHEN THEY ASK “HOW MANY DEVELOPERS DO YOU HAVE?”

Do not misrepresent the talent pool as current employees.

Recommended response

"DISTILLOGIC maintains structured engineering capability across software, cloud, data, AI, QA and delivery disciplines. For each engagement we confirm the specific team and named profiles according to the technical requirement, seniority and required mobilisation date."

If they require an exact number of current employees:

Provide only the accurate current number.

Never convert

"available candidates"

into

"employees."

23. RESPONSE WHEN THEY ASK FOR CVs IMMEDIATELY

- Hello [NAME]

Yes.

To make the profiles relevant, please send the key requirements for each role, including:

- role
- required technologies
- seniority
- expected start date
- duration

remote / onsite requirement.

We can then provide a targeted shortlist rather than sending unrelated CVs.

- Best regards

Spiros

24. FIRST PHONE CALL - OPENING

"Hello [NAME], this is Spiros Melas from DISTILLOGIC TECHNOLOGIES.

We are a software engineering and technology delivery company and I am calling because we are developing partnerships with organisations that use external engineering capability for software projects and delivery programmes.

I wanted to understand whether this is relevant to your area or whether there is another person within [COMPANY] responsible for technology-delivery partners."

Then stop talking.

Let the other person answer.

25. IF THEY SAY "WHAT EXACTLY DO YOU DO?"

"We support software and technology delivery across software engineering, systems integration, application modernisation, cloud, data, AI and quality engineering.

Depending on the requirement, we can take a defined work package, provide a dedicated engineering team or support a wider programme under the client's delivery structure."

26. IF THEY SAY "WE ALREADY HAVE SUPPLIERS"**Recommended response**

"Understood. We are not necessarily looking to replace an existing supplier.

We are interested in becoming an additional delivery option where you need extra capacity, a specialist capability or a separate work package that needs to be delivered."

Then ask

"Do you maintain an approved supplier or partner framework for this type of requirement?"

27. IF THEY SAY "WE DON'T NEED ANYONE NOW"**Recommended response**

"Understood.

Do these requirements normally arise through your team, or would another department handle external engineering partners when additional capacity is needed?"

This can give you the correct contact even when there is no immediate project.

28. IF THEY SAY "WE ONLY WORK WITH APPROVED VENDORS"**Response**

"That makes sense. Could you direct me to the relevant supplier or procurement process so we can understand the qualification requirements?"

The objective becomes

Vendor Onboarding

not immediate selling.

29. IF THEY SAY "SEND ME YOUR COMPANY PROFILE"**Response**

"Absolutely. I will send a short capability statement and corporate presentation.

Once you have reviewed them, I would also appreciate understanding the types of engineering requirements for which you normally use external partners."

30. FIRST MEETING OBJECTIVE

The purpose of the first meeting is not to give a long sales presentation.

The purpose is to answer

What does the Client need?

Why do they need it?

When do they need it?

What are they currently unable to deliver internally?

How do they engage external suppliers?

Who decides?

What should DISTILLOGIC do next?

31. FIRST MEETING STRUCTURE**Recommended 30-minute structure**

- 0-5 Minutes

Introductions.

- 5-10 Minutes

Short DISTILLOGIC overview.

- 10-22 Minutes

Client requirement and discovery.

- 22-27 Minutes

Potential engagement model.

- 27-30 Minutes

Agree specific next action.

The Client should normally speak more than DISTILLOGIC during discovery.

32. FIRST MEETING INTRODUCTION

"Thank you for taking the time.

Rather than spend the meeting presenting our entire company, I would prefer to give you a short overview of DISTILLOGIC and then understand your current technology-delivery environment and where an external engineering partner could potentially add value."

Then

"DISTILLOGIC provides software engineering and technology delivery capability across software, integration, modernisation, cloud, data, AI and quality engineering.

We can work at project level, work-package level or through dedicated engineering teams.

It would be useful for me to understand how [COMPANY] currently structures external technology delivery."

33. DISCOVERY QUESTIONS - BUSINESS

Ask selectively, not as an interrogation.

Priority Questions

"What technology initiatives are currently creating the greatest delivery pressure?"

"Are there projects where delivery capacity is currently constrained?"

"Are you mainly looking for individual specialist capability or responsibility for complete scopes?"

"Are these requirements supporting internal platforms or your own clients?"

"What is driving the requirement - deadline, internal capacity, specialist expertise or another factor?"

34. DISCOVERY QUESTIONS - TECHNICAL

"What is the current technology environment?"

"Is this a greenfield project or an existing application?"

"What are the principal technologies involved?"

"Is the architecture already defined?"

"Would you expect the partner to contribute to architecture and technical decisions?"

"What development and DevOps environment are you currently using?"

"Are there existing engineering standards we would need to follow?"

35. DISCOVERY QUESTIONS - DELIVERY

"What would you ideally expect the external partner to own?"

"What are the expected deliverables?"

"Is there already a project manager or delivery lead?"

"Who owns technical acceptance?"

"What would success look like at the end of the engagement?"

"Is there a fixed deadline?"

36. DISCOVERY QUESTIONS - TEAM

"What roles do you expect to require?"

"What seniority is required?"

"Would you prefer individual specialists or a cross-functional team?"

"Would technical leadership be required from DISTILLOGIC?"

"What level of Client-team integration is expected?"

37. DISCOVERY QUESTIONS - COMMERCIAL

Do not make the conversation uncomfortable by asking all financial questions immediately.

When appropriate

"Has a commercial model already been defined for the requirement?"

"Are you considering fixed price, Time & Materials or a dedicated team?"

"Is there an approved budget range?"

"What payment terms normally apply to technology suppliers?"

"Would this be delivered under a Purchase Order, framework agreement or project-specific SOW?"

38. DISCOVERY QUESTIONS - PROCUREMENT

"Does DISTILLOGIC need to complete vendor onboarding before receiving work?"

"Is there an approved supplier list?"

"Who manages supplier qualification?"

"Are there mandatory insurance requirements?"

"Are there mandatory security certifications?"

"Do you use your own MSA or can supplier terms be considered?"

39. DISCOVERY QUESTIONS - SECURITY

"Will the team have access to production systems or Personal Data?"

"Are Client-managed devices required?"

"Are there specific cloud or data-residency requirements?"

"Is a security questionnaire part of supplier onboarding?"

"Are any specific certifications mandatory for the supplier?"

40. QUESTIONS THAT REVEAL REAL BUYING INTENT

These questions are especially valuable

"What happens if the requirement is not solved?"

"When do you need the team or project to start?"

"Has budget already been approved?"

"Who besides you will be involved in the decision?"

"Are you currently evaluating other suppliers?"

"What would need to happen for DISTILLOGIC to be considered?"

41. DO NOT OVERSELL DURING DISCOVERY

Avoid statements such as

"We can do everything."

"We have hundreds of developers."

"We are the cheapest."

"We can start tomorrow."

"We have done this many times."

unless each statement is factually supportable.

Better language

"This appears within our capability, but I would like our technical team to review the specific requirements before making a commitment."

42. WHEN YOU DO NOT KNOW THE ANSWER

Use

"I don't want to give you an inaccurate answer. I will have that specific point validated before we include it in our proposal."

This is stronger than inventing a technical answer.

43. DISCUSSING PRICE DURING THE FIRST MEETING

If asked

"How much does a Senior Developer cost?"

Do not immediately negotiate against yourself.

Response

"Our commercial rates vary according to the required stack, seniority, duration, delivery responsibility and contractual structure."

For standard senior software-engineering requirements we can provide an indicative range, and once we have the exact requirement we will confirm the commercial rate."

Use the Rate Card as the reference.

Never disclose

- internal Floor Rate
- candidate salary
- contractor cost

internal margin.

44. IF THEY SAY YOUR RATE IS TOO HIGH

Do not immediately discount.

Response

"I understand."

Before adjusting the rate, it would be useful to understand what commercial level you are targeting and what is included in that comparison - particularly seniority, duration and delivery responsibility."

Then determine whether they are comparing

- freelancer
- employee cost
- offshore bodyshop
- consultancy

managed delivery.

45. PRICE NEGOTIATION PRINCIPLE

When giving a concession, receive something in return.

Possible exchange

Client Requests Lower Rate

DISTILLOGIC may request

- longer commitment
- larger team
- guaranteed volume
- faster payment
- reduced onsite requirement
- reduced delivery risk

framework agreement.

Do not give discounts without commercial reason.

46. WHEN CLIENT ASKS FOR NET 60**Response**

“Net 60 can be reviewed. Our standard commercial basis is Net 30, but we can evaluate the Client's procurement requirements as part of the overall commercial structure.”

Do not automatically reject the project.

Do not automatically accept it either.

47. WHEN CLIENT ASKS FOR NET 90**Response**

“We would need to review Net 90 as part of the overall commercial structure because of the financing exposure associated with longer delivery periods. We can evaluate it together with the engagement value and duration.”

Internal management approval is required.

48. WHEN CLIENT REQUESTS FREE TECHNICAL WORK

Distinguish sales discussion from real consulting.

Free

- introductory call
- high-level discussion

initial capability assessment.

Potentially billable

- architecture design
- extensive code review
- technical audit
- detailed solution design
- PoC
- prototype
- migration assessment

multi-day workshops.

Response

“That level of analysis would normally form part of a structured Discovery or Assessment engagement. We can define a short scope for it and then use the findings to prepare the implementation proposal.”

49. WHEN CLIENT ASKS TO START BEFORE CONTRACT**Response**

“We can prepare mobilisation in parallel, but material billable delivery should begin once the required commercial authorisation is in place.”

Commercial authorisation may include

- signed SOW
- Purchase Order
- Call-Off

other approved contractual instrument.

50. MEETING CLOSING**Never end**

"Okay, we'll be in touch."

End with a specific action.

Example

"Based on today's discussion, I suggest the following next step: you send us the technical requirements and expected team structure, we complete an internal capability review and return with a focused technical and commercial proposal."

Then confirm

"Would that work from your side?"

51. GOOD NEXT ACTIONS**A meeting should ideally end with one of**

Client sends technical requirement

Client sends RFP

Client sends role specifications

Technical workshop scheduled

NDA exchanged

Supplier onboarding initiated

Engineering profiles requested

Rate Card requested

Proposal requested

SOW requested

Procurement introduction

Second technical meeting

52. POST-MEETING FOLLOW-UP EMAIL**Subject**

DISTILLOGIC / [CLIENT] - Next Steps

- Hello [NAME]

Thank you for today's discussion.

My understanding is that [CLIENT] is currently considering:

[REQUIREMENT]

[REQUIREMENT]

[REQUIREMENT]

The main objectives discussed were

[OBJECTIVE]

[OBJECTIVE]

From the DISTILLOGIC side, the proposed next step is:

[SPECIFIC NEXT ACTION]

To proceed, we would require

[ITEM]

[ITEM]

[ITEM]

Once received, we will review the requirement and prepare the appropriate technical and commercial response.

- Best regards

Spiros Melas

Managing Director

53. FOLLOW-UP AFTER RECEIVING REQUIREMENT

- Hello [NAME]

Thank you for sending the requirement.

We are reviewing

- scope
- required technologies
- team structure
- timeline
- delivery model

commercial structure.

Our formal response will be structured around the specific requirement rather than a generic capability proposal.

- Best regards

Spiros Melas

54. PROPOSAL SUBMISSION EMAIL

Subject

DISTILLOGIC Proposal - [PROJECT NAME]

- Hello [NAME]

Please find attached DISTILLOGIC's Commercial & Technical Proposal for:

[PROJECT / ENGAGEMENT NAME]

The proposal covers

- our understanding of the requirement
- proposed scope
- delivery approach
- team structure
- timeline
- commercial model

payment terms.

I suggest that we review the proposal together so that any technical or commercial questions can be addressed directly.

- Best regards

Spiros Melas

Managing Director

55. PROPOSAL FOLLOW-UP

- Hello [NAME]

I am following up regarding our proposal for [PROJECT].

I would be interested to understand whether there are any:

- technical questions
- scope adjustments
- commercial points

procurement requirements

that we should address before the next stage.

- Best regards

Spiros

56. RFP INVITATION RESPONSE

Subject

RFP Acknowledgement - [RFP NAME]

- Hello [NAME]

Thank you for inviting DISTILLOGIC TECHNOLOGIES to participate in the [RFP NAME] process.

We confirm receipt of the documentation.

We will review the

- scope
- technical requirements
- contractual requirements
- submission instructions

commercial structure.

Any clarification questions will be submitted through the designated process.

- Best regards

Spiros Melas

Managing Director

57. PARTNERSHIP MEETING WITH SYSTEM INTEGRATOR

The discussion should focus on

- what client projects they typically subcontract
- which technologies create resource shortages
- whether they subcontract individuals or full teams
- whether they allocate work packages
- expected margins / rate expectations
- security requirements
- subcontractor approval
- white-label delivery
- geographical restrictions
- end-client interview requirements
- payment terms

opportunity pipeline.

Key question

"What type of work would make you consider DISTILLOGIC as an additional delivery partner?"

58. PROCUREMENT MEETING

The objective is different from a sales meeting.

Ask

"What documentation is required for supplier onboarding?"

"Are there minimum insurance requirements?"

"Are specific certifications mandatory?"

"What is the standard MSA process?"

"What are the standard payment terms?"

"Is a Purchase Order mandatory before work starts?"

"Is there a vendor portal?"

"Are suppliers reviewed annually?"

"Is there a framework agreement or preferred supplier list?"

59. TECHNICAL MEETING

Bring appropriate technical personnel when required.

The Managing Director does not need to personally answer deep architecture questions.

Recommended structure

Business context

→ Current architecture

→ Requirement

→ Technical constraints

→ Delivery responsibility

→ Team

→ Dependencies

→ Timeline

→ Next technical action

60. INTERNAL POST-MEETING RECORD

Immediately after a material meeting, record:

Client

[NAME]

Opportunity

[PROJECT]

Need

[SUMMARY]

Estimated Value

€[VALUE]

Timing

[TIMELINE]

Decision Maker

[NAME]

Procurement

[STATUS]

Technical Requirement

[SUMMARY]

Competition

[DETAIL]

Main Risk

[DETAIL]

Next Action

[ACTION]

Owner

[NAME]

Deadline

[DATE]

This information should feed the Project Intake / RFP Qualification Form.

61. OUTREACH CADENCE

A reasonable standard sequence

- Day 1

Initial email / LinkedIn connection.

- Day 5

First follow-up.

- Day 12-15

Second follow-up.

- Day 25-30

Final light-touch follow-up.

Do not repeatedly message people every day.

The objective is professional persistence, not pressure.

62. OUTREACH QUALITY RULE

Ten carefully selected relevant contacts are generally more valuable than hundreds of random messages.

Before contacting someone, understand

- company
- role
- likely responsibility

why DISTILLOGIC could be relevant.

Personalisation should be based on meaningful business relevance, not superficial phrases.

63. DO NOT WRITE GENERIC SALES LANGUAGE

Avoid

"We are excited to introduce..."

"We offer innovative cutting-edge solutions..."

"We are passionate about technology..."

"We are the best..."
"Our world-class team..."

Prefer

"We support..."
"We deliver..."
"Our engineering capability covers..."
"We are interested in understanding..."
"Based on the requirement..."

64. DISTILLOGIC SALES PRINCIPLE

We do not sell developers first.

We identify a delivery problem first.

The preferred sequence is

Client Problem

↓

Technical Requirement

↓

Delivery Scope

↓

Required Capability

↓

Delivery Model

↓

Team

↓

Commercial Proposal

↓

Contract

↓

Mobilisation

↓

Delivery

65. WHAT SUCCESS LOOKS LIKE

An initial outreach is successful when it produces one of the following:

- qualified meeting
- technical discussion
- live requirement
- RFP invitation
- supplier onboarding
- request for proposal
- request for profiles
- procurement introduction

future opportunity with a defined follow-up point.

The purpose is not simply to receive a reply.

66. MANAGEMENT RULE

No material commercial commitment should be made during an introductory conversation without confirming:

- capability
- resource availability
- delivery risk
- pricing
- contractual requirements

payment exposure.

Statements made during sales discussions must remain consistent with the final Proposal, SOW and MSA.

Complexity distilled. Technology delivered.
